Prepared by the United States Departcucurbits does not occur through soil thing else eating into his returns. or seed. The striped cucumber beetle the only means of summer transmis- in the season. Another advantage of slon of the disease in the localities adequate farm transportation is that that have been studied. Introduction of virulent bacteria into the interior plant tissues is necessary for infection. These points are given in a recent United States department of agriculture publication detailing the results of studies on the disease, which occurs in 31 states, including the territory from Vermont and Canada to Florida and west to Minnesota, Nebraska, Colorado and Texas. The disease also probably occurs in parts of California. Of the common domestic cucurbits the disease affects cucumbers, cantaloupes summer and winter squashes and pumpkins, but not watermelons.

Use Bordeaux Mixture. Spraying with strong bordeaux mixture and lead arsenate paste (4-5-50 plus 2) is recommended where the disease is likely to be severe. Treatments should begin as soon as the cucumber nd should continue at intervals of about a week until the cucumber bee- Gathering Potatoes in Field and Loadtles practically disappear from the field. In localities where downy mildew is also prevalent the treatments should be continued later as a partial insurance against this disease.
